

Chris Rabl

The Experimental Prototype City of Today

Chris continues to push the boundaries of design and technology to help influence the future of our community.

Born and raised in Lethbridge, Chris was always excited about the potential of technology which is what led him to study Computer Science at the U of L. After graduating he joined Autovance, a local startup that develops software solutions for the automotive industry. As Autovance's lead front-end engineer, Chris continues to push the boundaries of design and technology. In his spare time, he enjoys building software and hardware side-projects, and can usually be found co-organizing a CodeYQL meetup or sliding around the curling rink at the ATB Centre. Chris is extremely passionate about good design and is also a vocal advocate for Lethbridge's burgeoning tech sector.
